

**Compound:** Ketamine in FoamaDerm

**Ingredients:**

Ingredient	Quantity
Ketamine	Less than or equal to 4%
FoamaDerm	qs to 100 g

**Tools and Equipment:**

1. Spatula
2. Analytical balance

**Directions:**

1. Weigh Ketamine and add to the FoamaDerm bottle. There is no need for any solvent.
2. Close the cap and gently tap/swirl the container. There is no need for continuous or vigorous shaking.
3. A clear liquid will be formed within 15-20 minutes.
4. Foam will be dispensed upon pressing the actuator.

**Notes:**

- Use proper PPE, work under fume hood.
- Equipment should be cleaned with isopropyl alcohol 70% to reduce the chance of bacterial or fungal contamination.
- The percentage drug concentration is on a weight/weight basis.

**Packaging:** FoamaDerm original bottle

**Label:** For External Use Only, Store at Room Temperature

**Storage/BUD:** 3 months room temperature
